

HOSE BARBS (HB)

Applications: Hose barbs are used in wide variety of applications. Hose barbs on connectors come in many shapes, sizes and materials. The slope and depth of the barb, sharpness of the gripping edge, number of barbs, and spacing of barbs are all factors that contribute to the gripping and sealing ability of hose barbs.

Select the proper hose barb depending upon your specific application. Whether it be screw-in style, no clamp or or crimped to provide additional holding power make sure the barb matches the hose or tube. Pressure requirements, chemical resistance and environment are also selection factors.

Make sure the barbs are fully inserted to give maximum holding power.
